

BJohnson Week 7 Reflections

Needless to say this was probably my toughest lesson to get through with all of the obstacles and challenges I have faced in this time. There were times that I would even doubt myself of getting through this at all. There were times I sat at this computer and do anything, trying to come up with something that would work, not making any sense, and getting more frustrated with each passing moment and try. Encouragement by people made the difference (along with the statement that I have always told my students, "That there are plenty of people not as bright as you that have made it through the class" - I shared the clean version with you!).

Happy to say that there has also been times where ideas were clear as a bell. Throughout my entire life, I have powered through assignments and problems, unfortunately I cannot do that process much anymore. I don't know exactly why, but it is not efficient at this stage in my life.

In this lesson I did understand better how the process flow of mapping, features layers, and filtering works from a Javascript viewpoint. I have also realised that in order to fully understand and become proficient, I need to take a Javascript course, maybe on Udemy or by one of my books (Head First Javascript Programming - by Freeman & Robson).

I thank you for all of the help and understanding.

Bertram Johnson
